

# **E-Cigarettes, Vapes, Vapors NOT Healthier Than Normal Cigarettes!**

-According to the California Department of Health, **E-cigarette vapors (actually it's aerosol) contains 10 Chemicals which cause Cancer.**

-An analysis of e-cigarettes by the FDA in 2009 found that they **“contained detectable levels of known carcinogens and toxic chemicals** to which users could be exposed.”

-In August 2014, the World Health Organization called upon governments to ban the sale of e-cigarettes to minors & warned that they posed **a serious threat to unborn babies & young people.**

--In Nov.2014, Researchers in Japan were commissioned by Japan’s Health Ministry to do a study on e-cigs. The study concluded that some e-cigarettes contain **10 times the level of cancer-causing carcinogens** than its counterpart of normal cigarettes.

-Researchers at the Portland State University found that whenever an e-cigarette was set at 5 volts, the vapors contained 380 micrograms of formaldehyde on an average per sample. The study declares that e-cigs **may increase the risk of developing cancer by up to 15 times.** The Study was published in the New England Journal of Medicine.

-StopCancerFund.org says **"Don't be fooled. E-cigarettes are addictive & contain cancer causing chemicals"**.

-A study done in 4 nations found that e-cigarette users were **no more likely to quit than regular smokers** even though 85% of them said they were using them to quit. Another year-long study, this one in the U.S., had similar findings. People may believe they are smoking e-cigarettes to help them quit but **6-12 months after being first interviewed, nearly all of them are still smoking regular cigarettes.**

-Vapes and other electronic cigarettes are so popular among teens and young adults, that these devices **may actually increase and encourage smoking** rather than helping the population get off from cigarettes and other drugs.

-Flavors, such as cotton candy & bubble gum are not only encouraging teenagers to try e-cigarettes, they are resulting in accidental poisonings among children. **Over half of the 2,405 calls to poison centers between September 2010 & February 2014 concerned children 5 & under who had come into contact with e-cigarettes.**

-Remember that the Tobacco Industry also claimed for decades that their product was safe & did not cause cancer. The E-Cig/Vape industry is following in their foot steps.

-There are no long-term studies to back up claims that the vapor from e-cigarettes is less harmful than conventional smoke. More information at [www.iSawTheLightMinistries.com](http://www.iSawTheLightMinistries.com)
